

# Ashfaque Jahan

## Penetration Tester

I'm a cybersecurity enthusiast with a strong interest in offensive security. I enjoy learning how attackers find and exploit vulnerabilities in systems. My goal is to understand these techniques to help improve overall security. I'm also interested in tools, automation, and how real-world attacks work in practice.

## Relevant Experience

Junior Penetration Tester · **Fetlla** May 2025 — Present

Conduct comprehensive penetration testing on web applications and Android applications. Identify and exploit security vulnerabilities using industry-standard methodologies. Create detailed reports with proof-of-concepts and remediation recommendations. Collaborate with development teams to implement security fixes and best practices.

Bug Bounty Hunter · **Independent** June 2023 - Present

Actively participate in public and private bug bounty programs on platforms like HackerOne, Bugcrowd and yeswehack. Proactively discover and report security vulnerabilities in web applications and Android applications. Develop proof-of-concept exploits and write clear, concise vulnerability reports with actionable remediation steps, contributing to the enhancement of real-world application security.

## Certifications

Certified AppSec Practitioner (CAP) · **The SecOps Group**

This certification validates a strong understanding of application security fundamentals, including common web vulnerabilities (OWASP Top 10), secure coding practices, and real-world attack simulations.

Certified Penetration Tester · **RedTeam Hacker Academy**

Covers core penetration testing skills including vulnerability assessment, exploitation, reporting, and red team tactics. Includes lab-based learning for web, network, and system exploitation.

## Education

**IndiraGandhiNational Open University**

Pursuing a Bachelor of Arts (Honours) in English with a focus on literature, critical analysis, and language studies (2023–2025).

## Projects

### RapidDNSSubdomain Enumerator

A simple yet effective Bash script for subdomain enumeration using RapidDNS.io. It handles pagination seamlessly, automatically removes duplicate entries, displays a real-time loading spinner, and stores the final results in a neatly formatted file.

### ROT13 Decrypt

A simple GUI-based tool built using Python Tkinter to decrypt ROT13-encoded strings. ROT13 is a basic letter substitution cipher used in obfuscation. This tool helps users quickly decode ROT13 text through an interactive desktop interface.

## Skills

### Web & Network Security

Burp Suite, Nmap, Metasploit, FFUF, Nikto, SQLmap, Dirsearch

### Mobile Security & Analysis (Android)

MobSF, APKTool, JADX, Frida, Objection, ADB

### AI-Assisted Scripting & Automation

ChatGPT, GitHub Copilot, Python (automation scripts), Bash, Claude

### Web Development

HTML, CSS, JavaScript
